Summary

Full-stack developer with 4+ years building DeFi and payments infrastructure on Solana, past clients include Jupiter, alongside frnx.ai, fishnet.tech and Botborgs. Comfortable owning a project end-to-end, from on-chain programs to production frontends.

Professional Experience:

Full-Stack Solana Developer | Freelancer *(2022 - Present)*

- **Contributed to Jupiter telegram bots** since the foundation. Full jupiter API suite, including prediction markets, wallet management (Privy), notifications, referrals, copy trading, gasless transactions, UI/UX. [14k users / 3.8M volume]
- **Responsibly disclosed a critical vulnerability in Phantom Wallet's transaction simulation**, rewarded through their Bugcrowd bug bounty program. [Demo]
- **Built a Squads CLI** to experiment with the new solana kit sdk, writing a comprehensive guide about the code and utilities used. [Code] [Guide]
- **Contributed to frnx.ai** by building Solana transactions, enabling portfolio and liquidation swaps, staking, subscriptions, Solana Blinks and referrals, while integrating them on the frontend with intuitive UI/UX design. [Demo]
- **Designed and implemented a Solana delegate vault program,** enabling liquidation of user portfolios by a delegate wallet via a crank service triggered by conditions like spot loss, take profit and time. [Code]
- **Built a subscription full-stack app**, with Bun and Elysia. [Code]
- **Designed an on-chain marketplace protocol on Solana**, integrating Token22 for token-gating, cNFTs for tokens-as-invoices and monetization features. [Code]
- **Created a Telegram bot server** leveraging Vybe network as data source to manage price alerts, executing orders and swaps. [Code] [Demo]
- **Developed a transaction builder using Mango Markets**, abstracting operations like deposits and withdrawals [Code]
- **Built a creator platform with Solana-Supabase authentication**, integrating token-agnostic payments using Solana kit npm packages. [Code] [Demo]
- **Developed monetization components for Fishnet's infrastructure** using Solana Pay, integrating Solana authentication and wallet connection. [Backend]

- **Reverse-engineered and indexed data from a closed-source staking protocol**, enabling a successful **airdrop** distribution for Botborgs' NFT community. [Code]
- **Explored NFT development with Metaplex Core standard**. [Code]
- **Experimented Solana indexing using the Aleph.im indexer framework**, enhancing data accessibility and querying capabilities. [Reference]

Education:

- **Double Degree in Computer Science and Business Management**: *University of Alicante, Spain* | 2024
- International exchange at Technical University of Ingolstadt, Germany

Languages:

- Spanish (Native)
- English (C1 / Professional working proficiency)

Technical skills

- **Backend:** Node.js, Bun, Elysia, REST APIs, WebSocket, GraphQL
- **Blockchain:** Solana, Anchor, Rust
- **Frontend:** React, Next.js, TypeScript, TailwindCSS
- **Data/Infra:** PostgreSQL, Supabase, Docker, AWS, GCP, Grafana, BetterStack
- **Tools:** Git, CI/CD, Claude Code

Achievements:

- Led a solana workshop for university students. [Code] [Presentation]
- Winner at Solana Berlin Build Station with Brick Protocol. [See]
- Built storage solution using Cere Network at Polkadot Hackathon. [Code]
- Participated in multiple Solana hackathons.

Hobbies & Interests

- **Finance:** Keen interest in stocks, crypto and money management.
- **Entrepreneurship:** Involved in startup communities and continuously researching emerging technologies.
- **Sports:** Consistent in the gym and skilled tennis player.
